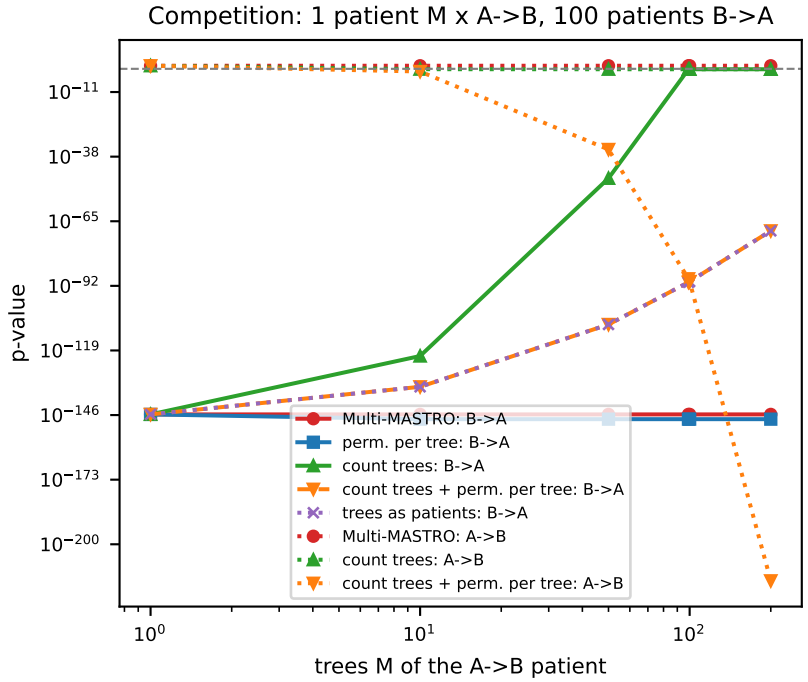
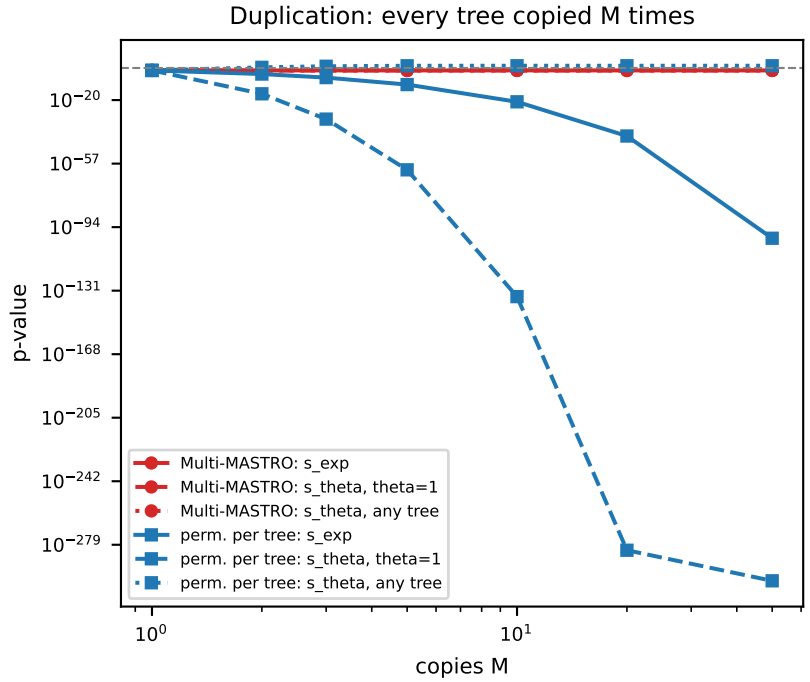
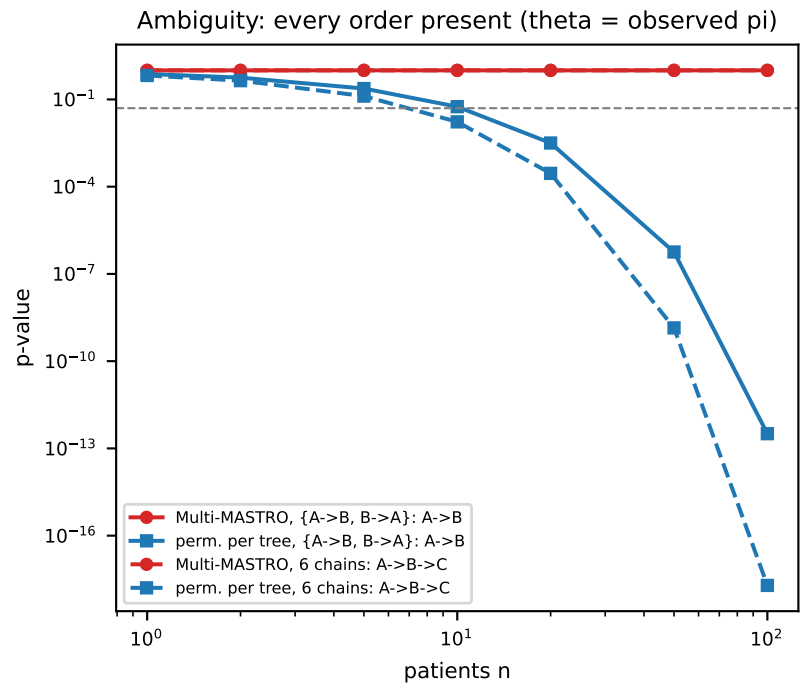
Shape: 100 A->B trees over a patients
p-value
carriers a (100/a trees each)
Multi-MASTRO
perm. per tree
count trees
count trees + perm. per tree
trees as patients



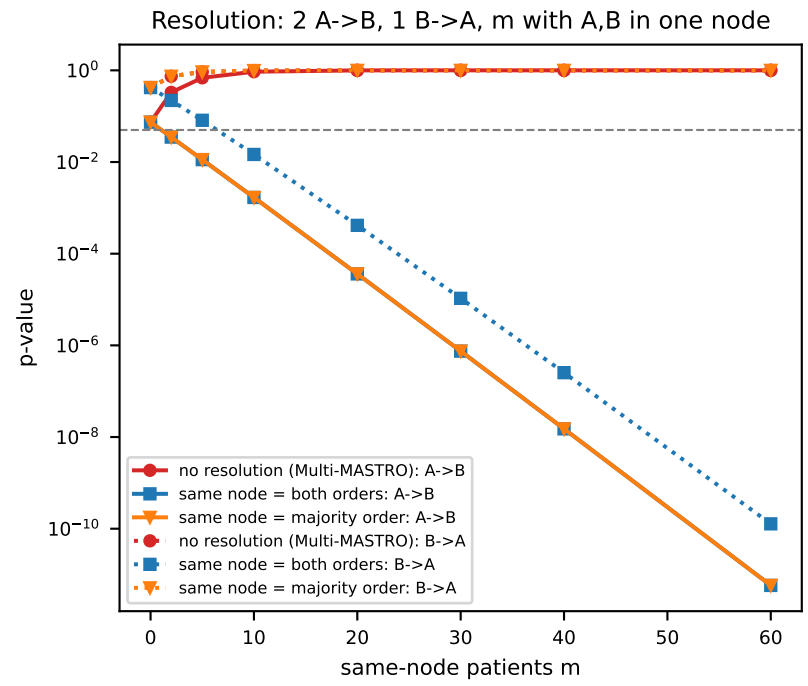
Competition: 1 patient M x A->B, 100 patients B->A
p-value
trees M of the A->B patient
Multi-MASTRO: B->A
perm. per tree: B->A
count trees: B->A
count trees + perm. per tree: B->A
trees as patients: B->A
Multi-MASTRO: A->B
count trees: A->B
count trees + perm. per tree: A->B



Duplication: every tree copied M times
p-value
copies M
Multi-MASTRO: s_exp
Multi-MASTRO: s_theta, theta=1
Multi-MASTRO: s_theta, any tree
perm. per tree: s_exp
perm. per tree: s_theta, theta=1
perm. per tree: s_theta, any tree



Ambiguity: every order present (theta = observed pi)
p-value
patients n
Multi-MASTRO, {A->B, B->A}: A->B
perm. per tree, {A->B, B->A}: A->B
Multi-MASTRO, 6 chains: A->B->C
perm. per tree, 6 chains: A->B->C



Resolution: 2 A->B, 1 B->A, m with A,B in one node
p-value
same-node patients m
no resolution (Multi-MASTRO): A->B
same node = both orders: A->B
same node = majority order: A->B
no resolution (Multi-MASTRO): B->A
same node = both orders: B->A
same node = majority order: B->A
